

Jay Jongik Thom

Senior Software Engineer

Champaign, IL | (253) 886-0919 | ljik95@gmail.com
linkedin.com/in/jongikthom | github.com/ljik95 | jaythom.dev

Full-stack engineer with 7 years building and scaling production frontend platforms. My focus is React and TypeScript at scale: design systems, monorepo architecture, and Core Web Vitals, backed by the Python, AWS, and Terraform infrastructure to ship them end to end.

EXPERIENCE

Corteva Agriscience

Champaign, IL

Full-Stack Software Engineer II

Aug 2021 – June 2026

- Led the migration of a core frontend platform from a multi-repo setup to a unified Nx monorepo, defining module boundaries and shared tooling now used by three product teams. Page load time fell 30%, JS bundle size 45%, and CI build times 40% through parallelization and caching.
- Designed a serverless data pipeline (Python, AWS Lambda, Terraform) to replace a manual workflow. It processes 50K+ records per daily run and has held 99% uptime over two years, cutting manual processing time in half.
- Built a shared component library from scratch: 50+ components, Storybook docs, and accessibility checks in CI. New-feature UI work dropped about 60% and design-to-code handoff was cut in half.
- Mentored junior engineers through code review, pairing, and architecture walkthroughs, and authored the team's coding standards, later adopted org-wide.

Full-Stack Software Engineer I

Nov 2019 – Aug 2021

- Built and maintained core features for a global agricultural management app serving 15,000+ active users, shipping production TypeScript and React.
- Raised test coverage from 38% to 82% by introducing TDD across the team, which cut the critical-bug rate 35% and roughly halved time spent in QA.
- Worked directly with PMs and designers to turn ambiguous requirements into features that shipped on schedule.

Tech for Korea

Remote

Front-End Engineer Intern

Oct 2018 – Mar 2019

- Rebuilt the UI architecture on four projects and introduced the team's first unit tests. The redesigns lifted task-completion rates 28% and the tests cut regression bugs 40%.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python

Frontend: React, Vue, design systems, Storybook, Web Vitals / performance, accessibility, HTML, CSS

Backend: Node.js, Python, PostgreSQL, REST APIs

Cloud & DevOps: AWS (Lambda), Terraform, CI/CD, Nx monorepo, Git

Practices: Test-driven development, integration testing, Agile

EDUCATION

Fullstack Academy

Chicago, IL · 2018–2019

Full-time software engineering immersive. Built web and mobile apps with JavaScript, React, React Native, SQL, and HTML/CSS.

University of Illinois at Urbana-Champaign

Champaign, IL · 2013–2018

B.S. in Chemistry. Moved into software after discovering programming mid-degree.
